d)

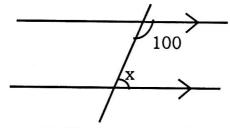

Lesson 49: Finding angles and values using propert of parallel lines.

> Co-interior angles are two angles which add up to 1800. They lie in same plane of transversal line.

Steps taken:

- ✓ Identify the two co-angles.
- ✓ Form the equation correctly.
- ✓ Solve the equation accurately.

Example 1: Find angle marked x.

 $x + 100^{\circ} = 180^{\circ}$ (co-interior angle)

 $x + 100^{\circ} - 100^{\circ} = 180^{\circ} - 100^{\circ}$

$$x = 80^{0}$$

Example 2: Find angle marked y.

 $a + 110^{\circ} = 180^{\circ}(\text{co-interior}/\text{s})$

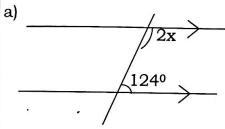

$$a + 110^{\circ} + 110^{\circ} = 180^{\circ} - 110^{\circ}$$

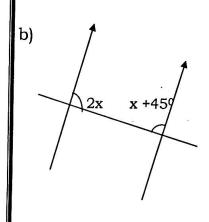

= 70°

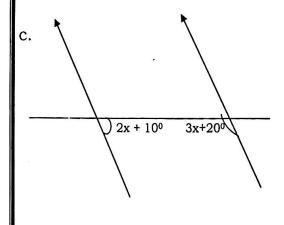

$$y = a+b$$

= $70^{\circ} + 40^{\circ}$
= 110°

Activity. 1. Solve for the unknown.
